

# ARTIS MICROPIA

## What lives in the flowerpot?

### invisible inhabitants under your feet

#### Answers to the questions

**Question 2:** You will usually find more roundworms in earth from the vegetable garden than in sand from the sandbox. Why do you think this is the case?

**Answer:** The earth from the vegetable garden contains a lot more nutrients, such as organic waste and microbes, than does the sand from the sandbox. That is why more roundworms live in the earth from the vegetable garden.

**Question 3:** In addition to the roundworms, you will often also see little balls. Can you find these too? What do you think these are?

**Answer:** These little balls are roundworm eggs.
