

ARTIS MICROPIA

Ditch water

Full of life

Answers to the questions to the experiment.

Question 2: What did you see? Use the appendix to identify the aquatic creatures.

Answer: The options are: paramecium, rotifer, water flea and amphipod. You may of course also discover other creatures which were not included in the appendix.

Question 3: How did the composition change during those five weeks? Did the numbers of living organisms increase or decrease the longer you let the culture sit?

Answer: The numbers of living organisms increase the longer you let the culture sit (provided you add enough oxygen).
